to enhancing our clients’
sense of well-being”*

What is a Glycolic Acid Peel?

A glycolic acid peel is a simple and controlled process which makes it possible to remove the cells died on the surface of the skin. It is available in concentrations varying of 20% to 70% of glycolic acid (a derivative of the sugar cane). A qualified technician applies the glycolic acid to a clean skin for one period of 5 to 7 minutes.. The acid is then neutralized, and then an emollient is applied. The treatment is beneficial for the face, neck, chest, back and the top of the hands.

The acid glycolic peel treatment is not dangerous for the skin. It is used to gently dislodge the layer of damaged cells which cover the healthy cells on the surface of the skin. An improvement to the appearance of the skin is obtained thanks to a series of controlled exfoliations which do not require the patient to stop their activities.

Treatment of Hyperhidrosis with Botox® Facial, Palmer (Palms), Axillary (Underarms), Plantar (Feet)

Sweating is a natural function of the body needed to regulate temperature and the secretion of sweat is controlled by the nervous system. Throughout an average day, our bodies naturally perspire as a way to regulate heat. In some individuals, natural perspiration is excessive, the eccrine glands are over-stimulated and sweat is produced beyond what is necessary to cool the human body; this condition is referred to as *primary hyperhidrosis*. With approximately 5 million sweat glands spread over the human body, approximately 2/3 of these glands are located in the palms. Primary hyperhidrosis may occur in the hands, feet and armpits - anxiety and nervousness can precipitate excessive sweating. Sweating on the face can also be quite severe and causes insecurity and anxiety in the individual concerned.

So why suffer any longer? A free, no obligation consultation is available at Permalaser with a board certified plastic surgeon. Call us and see if you are a candidate for this treatment!

What is a Glycolic Acid Peel....cont. from page 1

What improvements am I to expect?

The improvements obtained with glycolic acid treatments are:

- a reduction in fine lines and deep wrinkles and a light leveling of acne scars;
- a reduction in pigmentary irregularities (old age or brown spots) ;
- an increase in the natural glow of the skin, including softness and a uniform skin tone;
- a reduction in pore size;
- contributes to a better penetration of your hydrating creams

What is the recovery time following a treatment?

The glycolic peel is also known as the “lunch time peels”. The patients immediately resume their activities immediately after the treatment. Preferably, on the day of your treatment, do not wear make-up, perfume or after-shave lotions. Clean your face properly before arriving for your treatment. *Take note: It is important to wear a hat on the treatment day to protect your skin against sun rays on the day of the treatment.* **Take advantage of our special of the month! Receive a FREE MICRODERMABRASION TREATMENT with every Glycolic Acid Peel purchase!**
